Dear Gautam Sonkar,

Congratulation on clearing the second round of assessment for Frontend developer (MERN). Please read the instructions before taking the test, and complete the online assessment within the stipulated time. Kindly refer to the assessment link given below for the 3rd level of Assessment.

As part of the same

Develop a simplified version of Github's Issues page:

A simplified version of the GitHub issues page needs to be created (refer to any public repo's Issues page). Ignore the items in the header (search, filtering, stars, etc.) and only focus on implementing the list of issues. To begin with, first, collect open issues from Github's API and display them in a list. After this, add a pagination control to facilitate navigation across a complete list of issues.

Optional: In case you also add a React Router, one should be able to navigate directly to a particular issue page of choice.

Note: The main UI part needs to be as similar as possible to the Github Issues UI.

GitHub Issues API link: docs.github.com/en/rest/reference/issues

Request you submit the same (GitHub link) within 2 days of receiving this email.

Thanks

Hyrathon Team
